Conflict Minerals

According to Section 1502 of the Dodd-Frank Act, companies listed on US stock exchanges must disclose information on the use of so-called conflict minerals.

These are tantalum, tin, tungsten and gold from the Democratic Republic of Congo and its neighbouring countries (Angola, Burundi, Central African Republic, Republic of Congo, Rwanda, South Sudan, Tanzania, Uganda and Zambia) of the so-called DRC region.

Lenz Laborglas is aware of its social respon-

sibility with regard to the environment, safety, health and respect for human rights.

Our standard products are made from pure, amorphous borosilicate glass 3.3. All substances contained in the raw material occur naturally and are completely harmless to the environment.

Tantalum, tin, tungsten and gold are neither intentionally added to our products, nor are they necessary for their function. Borosilicate glass is often used in the analytical and medical industries due to its high inert properties.

Elements	by Weight
SiO ₂	80,60 %
B ₂ O ₃	12,60 %
Na ₂ O	4,20 %
Al ₂ O ₃	2,20 %

Elements	by Weight
MgO	0,05 %
Fe ₂ O ₃	0,04 %
CaO	0,10 %
Cl	0,10 %

Unless otherwise specified

We do not directly import conflict materials, nor do we currently have any evidence that our standard products may contain minerals originating from this conflict region.

We have received binding confirmations from our relevant suppliers that underpin our commitment to exclude the use.
